DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Sato (US Patent No. 5,985,064).

Sato discloses a chip compression bonding apparatus which includes a holding block (2) including a nozzle (3). The holding block (2) includes multiple suction passages (2b) and allows the nozzle (3) to be releasably held thereon. The nozzle (3) also includes a suction port (3a) which allows the chip (1) to be held on the nozzle surface. (Col. 3, lines 1-17.)

Regarding claim 4, the nozzle includes a suction hole (3a) and the holding block (2) also includes suction ports (2b).

Response to Arguments

3. Applicant's arguments filed 24 October 2003 have been fully considered but they are not persuasive.

4. While features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997). Applicant's feature of having "means with a plurality of suction parts for sucking and holding pressing chips" does not differentiate from prior art, because Sato is has plurality of suction holes and is capable of handling multiple pressing chips. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).
